*Riverside county is the 5th most populated California county, and the 15th largest in the United States.*
A bit of background...

- Western Riverside County will continue to be among the nation’s fastest-growing areas.
- Providing sufficient energy supplies will be critical for the region’s economic expansion and prosperity.
- Relying solely on new generation and transmission facilities is risky.
- Utility bills will continue to rise.
- Energy and water conservation regulations are largely limited to new properties … NEWER PROPERTIES ARE PRETTY ENERGY EFFICIENT.
- Nearly 200,000 properties in Western Riverside County constructed prior to 2000… OLDER PROPERTIES ARE PRETTY ENERGY INEFFICIENT.
- One of the best ways to guarantee energy supply is to conserve what we already have.
- Retrofitting the subregion’s older, energy inefficient properties is a good strategy.

The big question: How can this be accomplished?
Goal: Implement a regional program under WRCOG

- Economies of scale (1 program vs. 18 individual programs)
- Consistent regional messaging and marketing
- Consistent program design and implementation
- Ability to leverage and coordinate funding sources
Enabling legislation

- Authorized by state law (AB 811 and AB 474)

- Allows jurisdictions to offer financing to property owners for the purchase and installation of energy efficiency and water conservation improvements.

- Financing to property owners would be repaid over time through voluntary annual assessments on the property tax bill
